QCCS 2026

Quantum Computer Cybersecurity Symposium

Call for Posters

AT A GLANCE

Dates
November 11–13, 2026

Venue
The Guild Lounge
Scott Hall
Northwestern University
Evanston, IL, USA

Web
https://caslab.io/events/qccs/

DEADLINES

Abstract registration
October 18, 2026

Submission
October 25, 2026

Notification
November 1, 2026

POSTER SESSION CHAIR

Sanjay Deshpande
Northwestern University
sanjay.deshpande1@northwestern.edu

POSTER PROGRAM COMMITTEE

Theodoros Trochatos (University of Marlyand)

Yuntao Liu (Lehigh University)

The Quantum Computer Cybersecurity Symposium (QCCS) brings together systems security researchers, quantum hardware engineers, and practitioners operating quantum and quantum-secured infrastructure. The program committee invites submissions of **posters**. QCCS is a mixed academic and industry venue: we actively encourage contributions from practitioners whose work cannot be published as a conventional paper.

Scope

Submissions are solicited across the full spectrum of security for quantum computing systems. Topics of interest include, but are not limited to:

- Multi-tenant isolation and side channels on shared quantum hardware
- Control-plane, firmware, and calibration integrity
- Untrusted compilers, transpilers, and toolchains
- Quantum circuit confidentiality and IP protection
- Verification, attestation, and blind quantum computing
- Hardware Trojans and supply chain security
- Fault injection and denial of service
- Security of quantum memories and the error-correction stack
- Threat models for quantum computing platforms
- Quantum Cryptography, QKD security proofs and composable security
- Implementation attacks and countermeasures on QKD systems
- Device-independent and measurement-device-independent protocols
- QRNG entropy modeling, health testing, and validation
- Quantum network architecture, repeaters, and relay security
- Critical assessments of quantum security technologies

Out of scope. QCCS does not cover post-quantum cryptography: PQC algorithms and implementations, and their cryptanalysis, cryptanalysis of classical primitives by quantum algorithms, or PQC migration planning.

Submitting a Poster

A **poster** submission should include either an one-page abstract, or the final poster in portrait format (either in A0 size 841×1189 mm or similar 33.1×46.8 in) for evaluation, indicating the poster title and the name of the presenter(s). Presenters of accepted posters are responsible for printing their own posters and to attend the event in-person to present the work. Every uploaded file must be in **PDF** format.

Submit at: https://easychair.org/my/conference?conf=qccs2026
